Operation Review

I. 2013 operation in review

(I) Business Plan and Result

In FY 2013, we had net sales amounting to NT\$3,035,778 thousand, which was an increase of 6% or NT\$2,865,212 thousand from the same period of 2012. Corporate earnings in FY 2013 amounted to NT\$271,033 thousand or an increase of 3% of NT\$261,931 thousand from the same period of 2012 with earnings per share at NT\$3.52.

The pursuit of QE policy in USA and obvious global economic recovery, coupled with the positive growth in GDP in the development countries, contributed to the increase in demand for the consumption of consumer electronics. Accordingly, capital expenditure in the semiconductor sector sustained growth, to the extent that such growth in the semiconductor sector in 2014 to 2015 will be much better than before at the global level. In the quest for global energy saving, LEDs emerged as the policy guideline for most countries. It is expected that the LED industry will move towards another cycle of capital spending. We will continue to commit our resource in research and development and maintain the competitive power of the company through ceaseless innovation. In the area of the research and development of advanced technologies, our new products have successfully penetrated into the supply chain of a world-class company in 2013. The OEM production of wafer foundries in Taiwan and the world will have sizable capital spending in 2014-2015. This will be improved by the increase in purchase orders from Northeast Asia with Taiwan, which adds to the momentum of further growth. As such, the growth in the demand for wafer prober cards could be anticipated. In the testing application of LED, we have successfully developed the fully automated high-speed integrated wafer testing device. This device is in conformity to the requirement of the customers in flip-chip encapsulation and high-precision optometric testing. At the same time, we will also continue to develop different testing equipment and devices in LED pinnacle test, sorting, and encapsulation to the needs of the customers. Further to our upgrade in favor of the testing capacity of our customers, we also contribute to the competitiveness of the customers. This product line will be essential for our growth in the future.

2013 was clouded by the slow GDP growth worldwide and the decline of consumption power in Europe. In 2012, the slow pace of global economic recovery was

coupled with the proactive expansion of production capacity of LEDs in China. This resulted in excessive supply and development was not as expected. Accordingly, our profitability was hampered too. Yet, we continued our effort in committing our resources to research and development and fortified our competitive power through innovation. In the research and development of new technologies, we have successfully developed the single card 20000 pins multiple simultaneous wafer prober card in 2012 to satisfy the sophisticated needs in IC signals, power source, and functions.

The OEM production foundries of Taiwan had sizable growth in capital expenditure in 2013-2014. The increase orders from overseas to the encapsulation and testing industry provides a platform of highly anticipated growth in the future. Likewise, the growth in the demand for wafer prober in the future can be anticipated. In the testing of LEDs, we have successfully developed the fully automated die prober and will continue to improve the function of the die sorting devices. In the encapsulation of LEDs, the company will continue to develop different test equipment and devices. In addition to upgrading the function of testing for the customers, the company can also assist the customer to find out solution for encapsulation and testing. With the growth in the demand for LED application, this product line will be the prime force driving corporate development of the company.

In light of the development of the semiconductor industry and the LED industry, and the technology requirements in the future, MPI Corporation undertakes the following strategic planning and commits its effort to sustain its competitive advantage:

1. Further investment in research and development:
 - A. The increasing demand of portable smart devices and the wearable applications dictated for the development of wafer grade micro-distance testing technology for meeting the technological needs of the future.
 - B. Development of low resistance probe card to meet the demand for the testing of low power products.
 - C. Continue the development of multiple functions and performance testing and inspection equipment to meet the testing needs of LED customers in the future, and continue to provide customers viable solutions.
2. Extension of the product market:

Development of engineering use inspection and testing products for the semiconductor industry with the core technology of automation on hand.

(II) Vital production and sales policies

MPI Corporation will continue to strengthen its capacity in overseas service in order to further develop its business and fortify its competitiveness, as well as extend its business territories overseas. This will help to provide fast and complete technology services to the customers and hence to increase the market share the extent to which risk can be diversified. MPI Corporation will maintain its corporate philosophy of assisting its customers to upgrade their competitive power thereby positions the customers as its technology joint venture partners. MPI Corporation will provide customers with good quality products and timely technology service, which remains its vital production and sales policy. MPI Corporation expects to optimize return on investment to the shareholders and creates the best business opportunity and work environment for all employees.

III. The development strategy of the future

- (I) In response to the gradual introduction of the 4”~6” process of the LED customers, MPI Corporation will continue its effort in further vitalizing the functions of the prober and sorting devices to satisfy the testing and sorting needs of the customers.
- (II) Development of the semiconductor market with its core technology in automation and develop different extensions of products.
- (III) In responding to the needs of the consumers for slim, light, and small size products, MPI Corporation develops micro-distance probe card and high-frequency probers to upgrade the frequency in testing and efficiency for customer needs and competitiveness.

IV. The effect of the external competitive, legal and macroeconomic environment

The macroeconomy at the global level was influenced by the QE policy of the USA and Europe and regional economic recovery was obvious. Although the GDP growth in China fell below average, and political instability clouded Eastern Europe and Northeast Asia, the macroeconomic situation worldwide is still promising. Under the efforts of almost all governments of the world, carbon reduction and energy efficiency is an irreversible course of industrial development at the global level. MPI Corporation spares no effort in research and development, and never ceases to provide customers fast, efficient, and energy saving solutions. Indeed, this is the unchanged policy line and principle of the company. With continued improvement, MPI Corporation not only just seeks to withstand the competition in the external environment, but rather to satisfy to needs of its customers and create value of long-term investment in favor of the shareholders.

I wish you all joy and the best of luck.
