KEY FEATURES

Automated Single Wafer Loader

Convenient wafer loading with easy pre-alignment for automated routines. Loading or unloading of 100, 150 or 200 mm wafer is straight forward and intuitive.

Wafer Hot Swap

The automated single wafer loader and the Safety Test Management (STM™) provide a unique capability to load/unload wafers at any chuck temperature. Cooling down or heating up to ambient is not required anymore for loading or unloading the wafer.

Integrated Active Vibration Isolation

Highly effective vibration insulation with automatic level controlled air-spring damping system.

Internal frequency: 2.5 Hz
Automatic load leveling.

Minimized CDA Consumption

With the ERS patented technology, using the chiller for purging the ShieldEnvironment, the CDA consumption is reduced by as much as 50%. Nitrogen purging is still possible by using separate valve.

* Picture is courteously provided by ERS.

Thermal Chuck Operation

The thermal chuck can be operated by using the fully integrated touchscreen display, which is placed at a convenient location in front of the operator for fast operation and immediate feedback.

Integrated Prober Control

The hardware system controller is completely integrated into the probe system and designed to provide faster, safer and a more convenient probe system control and test operation. The keyboard and mouse are strategically located to control the software if necessary, as well as the Windows® based instrumentation.

OPTIONAL FEATURES

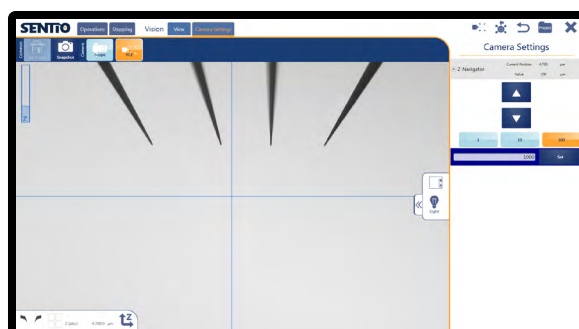

Safety Test Management STM™ Option

The STM™ system prevents opening of any doors during testing. Accidental opening of any system door during a negative chuck temperature is impossible on any event. Furthermore, an intelligent dew point control routine avoids moisture condensation during cold testing. The system automatically monitors the flow of CDA or Nitrogen. If the flow is interrupted or insufficient, the STM™ automatically turns the chuck into a safe mode by heating up the chuck as fast as possible to 60 °C.

Vertical Control Environment™ (VCE™)

The VCE™ allows the probing area to be observed from the side for safe operation. It automatically detects the height of the tips and defines the position of the chuck contact. The wizard-guided setup procedure takes into account working with probe cards and DC or RF probes. It saves time during initial contacting and prevents damage to probes or pads, especially in the covered MPI ShieldEnvironment™.

mDrive™

In addition to the standard joystick control, mDrive™ provides a truly intuitive, manual, one or two hands operation of all existing programmable stages, such as chuck, scope or MicroPositioners. X- and Y-axis fine control is available for the selected stage, where Z safety function requires additional enabling.

Probe Hover Control PHC™

MPI Probe Hover Control PHC™ Allows easy manual control of probe contact and separation to wafer. Separation distance can accurately control with micrometer feedback for probe to wafer/pad positioning. Ease of use guarantees the safest operation by minimizing error during critical set-up and probe change operations.

SOFTWARE SOLUTION

MPI's automated engineering probe systems are controlled by the unique and revolutionary, multi-touch operation SENTIO® Software Suite: simple and intuitive operation saves significant training time. The scroll, zoom, and move commands mimic modern smart mobile devices and allows everyone to become an expert in just minutes. Switching between the active application and the other APPs is just a matter of a simple finger sweep.
